

Issue Board

The GitLab issue board was used throughout the project to manage tasks, track progress, and ensure accountability across the team. Issues were created for each major component of the project, labelled by priority and category, and assigned to team members with due dates.

The board followed an agile workflow with four stages ,**To Do**, **In Progress**, **Done**, and **Closed**, giving the team clear visibility of what was pending, actively being worked on, completed, and formally closed at any point during the project. Issues covered areas such as data exploration, feature engineering, model development, web app deployment, and VIVA preparation.
